## About POVL Outdoor

Exclusively available at AuthenTEAK, POVL Outdoor offers luxurious, European-inspired outdoor furniture defined by refined craftsmanship and performance-driven materials. From sustainably sourced Indonesian teak to powder-coated aluminum and durable all-weather wicker, each piece is thoughtfully designed to withstand the elements while maintaining a polished aesthetic.

# DESIGNERS

## Povl Eskildsen

A product of the classic Danish furniture tradition, Povl's interest in design in general and furniture design in particular, started at a young age on the shop floor of his parent's furniture factory in Salling, Denmark. Povl studied architecture at the renowned Aarhus School of Architecture. He initially worked with a number of Danish indoor furniture companies before turning his sights on outdoor furniture. Working with among others, Trip-Trap and Gloster, Povl brought a new sense of design into the outdoor furniture industry, in particular in teak furniture, where his designs brought the elegance & comfort that had been the norm in Danish indoor furniture for decades to a category where heft and weight rather than design and comfort had been key selling parameters.

---

## Dick Björk

Dick's interest in furniture design was ignited at an early age where he spent a considerable amount of time in his parent's iconic furniture shop in Helsingborg, Sweden. Starting in his teenage years, Dick funded his passion for design by working after school and weekends assembling furniture, a task that laid the foundation for his passion for perfecting even the smallest of details. Dick went on to study metal work and trained as a cabinetmaker. Having worked as a craftsman at some of Sweden's leading furniture producers, Dick turned to furniture design. His early work include pioneering mixed material outdoor furniture for legendary Berga Form of Sweden.

---

# CARMAN

Experience the epitome of luxurious living with our Carman collection, meticulously designed with Mediterranean and US scales in mind. Crafted with the simplicity of aluminum, Carman has an almost natural and tactile feel, enhanced by the addition of teak arms and a marine-grade flat rope.

---

Finish: Powder coated aluminum \* Arm height (AH) \* Seat height (cushion included) (SH)

# SUPRA

Designed by Povl Eskildsen

Seamlessly combining extruded aluminum with teak and rope, Povl Eskildsen's Supra is a contemporary design that has his signature understated design language and comfort at heart. Experience Supra seating, designed for both style and comfort. You will appreciate the elegant aesthetic and the exceptional support from its carefully chosen multi-density foam cushions which offers a surprisingly comfortable sit.

# VORSO ALUMINUM

Designed by Povl Eskildsen

Inspired by Børge Mogensen's iconic J39 Chair. Povl Eskildsen's re-think of a classic Danish dining chair retains the charm of its predecessors but adds a new level of simplicity and practicality.

The Vorso Aluminum modular lounge stays true to the roots of its origins by retaining an organic look and feel with the practicality of a modular lounge.

# CALERA

Designed by Povl Eskildsen

With a tip of the hat to classic teak outdoor furniture, Calera takes the classic teak category to a new level of comfort and practicality. The essence of traditional heavy and uncomfortable teak chairs of old are morphed into a classic, yet light and comfortable design. The collection includes a wide range of dining chairs, from classic all teak pieces to chairs that combine teak sling seating surface.

The collection is complemented by the Calera Serving Table, a food preparation table that features soft-close drawers and an integrated champagne cooler/ice box.

Finish: Natural Grade A teak

# CLASSIC ADIRONDACK Designed by Povl Eskildsen

Experience a modern reimaging of an American classic with our Classic Adirondack collection. This refined update features hidden stainless steel hardware and enhanced ergonomics, elevating the comfort of this iconic century-old design to rival that of contemporary chairs. The Classic Adirondack Chair, a reimaged version of the classic. This redesigned classic maintains the comfortable seating position of our classic Adirondack chair, but raised to a height that makes it easier to get in and out of, blending timeless style with modern comfort and convenience.

## Seat and Back Cushion

# QUBE

Designed by Dick Björk

Inspired by the simple and clean lines of Johan Von Spreckelsen's La Grande Arche in Paris, the Qube collection is not only eye-catching, comfortable and durable. The sledge base allows for the chairs to be used on soft surfaces. The construction of the chairs and dining tables are reinforced with stainless steel components that provide the strength and durability required for many years of daily use.

# JOHNY

Designed by Povl Eskildsen

Although engineered for outdoor use, the eye-catching stainless steel reinforced solid tops make the Johnny tables as striking indoors as outdoors. Johnny tables are also available with ceramic and slatted teak tops. The tables with their set-in legs allow for unobstructed access to all sides of the table top that is either round, square or boat-shaped.

# BJORK

Designed by Dick Björk

Our hybrid solar and USB-C rechargeable lantern lamps are not only delightful to look at, but have a performance that is superb. The lamps can output over 600 lumens of light, are dimmable in 3 steps and can be operated from touch buttons on the top of the lamp or from a radio-based remote control with a range of up to 25m/82'. The remote signal can travel through most walls. The lamps can be set to operate autonomously on at dusk and off at dawn or when the battery pack runs low. At the lowest brightness setting, the run-time is up to 45 hours. A single remote control can be paired to control up to 256 lamps.

**Finish:** Teak/Wicker-Rope and Powder coated aluminum

**Base:** Powder coated steel

 Requires Assembly

All lamps are supplied with a radio-based remote control

### LAMP SPECIFICATIONS:

- Light output of >600 Lumens @2,700 Kelvin (warm white)
- Supplied with radio-based remote control with a range of up to 25 m/82 ft
- Dimmable in steps of 30%, 60% & 100%
- Touch controls
- Powered by a 3.7v 19,200 mAh Lithium-Ion battery pack
- Up to 13-hour run time at 600 lumens (100%)
- Up to 45-hour run time at 250 lumens (30%)
- Can be set to operate autonomously
- Hybrid charging: can charge from integrated solar panel or a USB adapter (adapter not included)
- Supplied with a USB-A to USB-C cable
- Memory for previously used setting
- CE, FCC, RoHS and IP65 certified

# UMBRELLA

Designed by Povl Eskildsen

Our macrame canopies were developed as part of an effort to expand our community outreach program aimed at empowering women in the villages around our factory in Indonesia. The program involves training women in traditional handicraft and thereby providing them with an income opportunity. Our solution dyed polypropylene macramé yarns has been tested to 3,000 hours of UV exposure.

In an effort to reduce plastic pollution in our environment in general and oceans in particular, our Macramé yarns contain 35% social plastic sourced from the Canadian NGO Plastic bank®.

Plastic Bank is a social enterprise that aims to reduce plastic waste in the environment while also addressing poverty. Plastic Bank's mission is to stop ocean plastic and improve the lives of collector communities. They achieve this by setting up plastic recycling ecosystems in underdeveloped communities, particularly in countries with high levels of plastic pollution. This includes Indonesia. Learn more on [www.plasticbank.com](http://www.plasticbank.com).

## MANUFACTURING

For manufacturing of our furniture, we partnered with a family owned Danish furniture company with a manufacturing base in Indonesia. Our manufacturing partner is owned by a family with six generations of furniture manufacturing experience. Their Indonesian factory is certified by the German certification company TÜV Rheinland for compliance with Indonesian legislation including laws that protect the environment and labor rights.

## MATERIAL CHOICE AND THE ENVIRONMENT

Teak is arguably the most environmentally friendly material used in the outdoor furniture industry. Stainless steel, aluminum and plastic wickers, etc are recyclable, but not renewable. One can not put the base metals and the crude oil that stainless steel, aluminum and plastics are made from back into the ground. Furthermore, converting base elements into metals and crude oil into plastics requires a great deal of energy, leads to large CO2 emissions and in many cases results in harmful by-products. In contrast teak is not only recyclable, but truly renewable: You put a seed in the ground and nature takes care of the conversion. The only energy required is provided by the sun.

# MATERIALS

## TEAK

Teak's dense nature, high content of silica and oils makes it hard wearing and naturally resistant to rot and impervious to insects. Teak is one of only a few tropical hardwoods that can be successfully grown in plantations. Our teak wood is sourced exclusively from certified government-owned plantations in Indonesia. The plantations are the single largest source of employment in Indonesia. Teak is grown like any other crop, where harvesting and re-planting is done in unison to ensure the plantations, which were first established in the late 1800's, will remain a renewable source of income for future generations.

Each teak log is carefully selected with the aim that all the teak wood used must originate from slow-grown mature trees. In the conversion into furniture components, virtually nothing is wasted. Shavings and saw dust are either recycled into agricultural products or converted into incense sticks for use at places of worship, while offcuts are burnt to generate energy.

The uniform color of our teak wood is achieved through careful selection, not manipulation with chemicals such as bleaches and stains. This ensures that when left untreated, the wood will over time develop a natural silver grey patina.

## STAINLESS STEEL

We use industry standard AISI304 grade stainless steel. Tubular sections are formed from sheets that have been pickled and passivated to ensure the metal is free of contaminants that may otherwise result in corrosion. Each frame is welded by hand, and each weld individually pickled. The completed frames are satin finished by hand to ensure a consistent and smooth finish.

When exposed to atmospheric air, stainless steel forms a natural passive layer that protects the base metal from corrosion. In corrosive environment such as the salt-laden air near coastal settings, airborne contaminants can disturb the protective passive layer. This will manifest itself as a light brown tarnishing, often referred to as "tea staining". This tarnishing has no impact on the performance of the metal and can be minimised by cleaning the furniture regularly with a mild soapy solution, preferably applied with a light abrasive such as 3M Scotchbrite. We recommend the use of coated stainless or coated aluminum furniture for coastal settings where a minimum of cleaning is of importance.

## ALUMINUM

The raw material required for aluminum is one of the most abundant minerals on earth. Aluminum's low weight to strength ratio makes it ideal for outdoor furniture. We use a multitude of alloys and a combination of die cast and extruded components.

The frames are welded by hand using essentially the same technique used for airplanes and rugged downhill mountain bikes. The finished frames are pre-treated, then powder coated. The pre-treatment ensures excellent coating adhesion and eliminates the risk of large scale coating failure that would otherwise be the result of moisture reaching the base metal through scratches in the coating that will occur in everyday use.

# POWDER COATING

Our powder coats are durable outdoor grade polyester-based finishes that are electrostatically applied to the substrate. Stainless substrates are mechanically and chemically pre-treated.

# CERAMIC

Its ability to withstand the elements and its unique hardwearing and scratch-resistant nature makes ceramic an excellent choice for an attractive, yet low-maintenance top.

**Slate**  
Qube, Johny

# WICKER

On our collection, the wicker-rope is man-made, colorfast, UV resistant and recyclable. The wicker used is a braided polypropylene (PP) rope. The wicking properties of polypropylene ensures that the rope, despite its fabric feel, will dry quickly after a downpour. Regardless of the wicker used, its application onto any given frame is done by skilled craftsmen.

## CARE AND MAINTENANCE

Outdoor furniture exposed to the elements will endure the heat and humidity of summer, as well as the dryness and freezing temperatures of winter. Aside from the change in temperature, seasonal extremes also involve the furniture being exposed to the UV radiation of the sun, rain and snow. Therefore, the requirements for outdoor furniture are significantly greater than that of indoor furniture. Nevertheless, high-end outdoor furniture requires only a bare minimum in terms of maintenance. Depending on the environment the furniture is used in, we recommend that the furniture be cleaned with warm soapy water once or twice annually.

### TEAK

Special teak care products may speed up the cleaning process, but are not required. We recommend that you allow your teak furniture to weather naturally. Your furniture will gradually develop a soft silver-grey patina. It is only the surface of the teak wood that changes color. Once you clean your furniture with soapy water, or a dedicated teak cleaning product, the furniture will return to a golden-brown color. Applying soapy water with a scouring brush or an abrasive pad such as 3M Scotchbrite® will speed up the cleaning process. Occasional cleaning will ensure your furniture develops an even silver-grey patina without dark spots.

After many years of exposure to the elements, the surface of your furniture may become rough. Should you wish to smoothen the rough surfaces, you can do so using a fine grit sandpaper. If you choose to only sand parts of the furniture, the sanded area will gradually develop a silver-grey patina again and blend in with the rest of the furniture.

For teak furniture exposed to the elements, we do not recommend the use of teak oil (linseed oil), paint or varnish. Teak oil, paint and varnish will break down in an uneven manner and may peel off in chunks, increasing the level of maintenance required, as the application of new teak oil, paint or varnish will require that the old layers be sanded off first.

### POWDER COATED FURNITURE

Our powder coatings are durable, outdoor grade polyester-based finishes that are electrostatically applied. Aluminum substrates are chemically pre-treated, while stainless steel substrates are mechanically and chemically pre-treated. Our aluminum frames are made from 70% recycled aluminum. Umbrella base plates, which are made from steel, are phosphated prior to being powder coated. The phosphating process increases corrosion resistance and paint adhesion.

Like any painted surface, large scratches and chips should be repaired as soon as possible. On umbrella bases, repair of scratches and chips is important to prevent rust. Any rust should be sanded off with fine grit sandpaper and the affected area thoroughly cleaned with isopropyl alcohol prior to the application of any paint. Before applying touch-up paint, test it on a non-visible location to ensure the color is a close match.

Powder coated surfaces can be cleaned with soapy water applied with a non-abrasive sponge such as those used for cars. Non-oily soap such as dish washing soaps (Dawn®, Fairy®, Sunlight®, etc) are ideal. Rinse thoroughly with lukewarm water and allow the furniture to air dry. It is important that any soap residue is rinsed off, as soap residue will attract dirt.

## CERAMICS AND HPL

We use quality HPL and ceramic surfaces on a wide range of our products, primarily table tops. Both HPL and ceramic surfaces are easy to maintain, but similar to any furniture used outdoors, HPL and ceramic surfaces should be cleaned regularly. When required, clean with soapy water and a non-abrasive sponge. For tough stains and lime deposits, use a dedicated house-hold grade ceramic cleaner such as those designed for cleaning bathroom tiles.

## ROPES

All our ropes are ROHS compliant marine grade ropes made from UV stabilised solution dyed polypropylene (PP). The PP yarns are braided together to form the visible textile surface. At its core, each rope is reinforced with either polypropylene yarns or solid extruded polyethylene.

As needed, clean the furniture with soapy water applied with a soft brush. Non-oily soap such as dish washing soaps (Dawn®, Fairy®, Sunlight®, etc) are ideal. Rinse thoroughly with lukewarm water. It is important that any soap residue is rinsed off, as soap residue will attract dirt. The wicking properties of polypropylene ensures that the rope, despite its fabric feel, will air dry quickly.

## HDPE WICKER, AND DANISH CORD

Our HDPE wickers as well as Danish cords are man-made wicker materials produced from UV stabilised High Density Polyethylene (HDPE). Both materials require a minimum of maintenance. As needed, clean the furniture with soapy water applied with a soft brush or a non-abrasive sponge. Non-oily soap such as dish washing soaps (Dawn®, Fairy®, Sunlight®, etc) are ideal. Rinse thoroughly with lukewarm water and allow the furniture to air dry. It is important that any soap residue is rinsed off, as soap residue will attract dirt.

## SLING FABRICS

As needed, clean the surface of the fabrics with soapy water applied with a soft brush. Non-oily soap such as dish washing soaps (Dawn®, Fairy®, Sunlight®, etc) are ideal. For tough stains use a solution with 20% household bleach and water. Rinse thoroughly with lukewarm water and allow the fabric to air dry.

## CUSHIONS AND POUFS

The care instructions for cushion covers are sewn on the inside seam that attaches the zipper to the cushion fabric. Note that the care instructions for different fabrics may not be the same. For tough stains that cannot be washed out with soapy water, use a solution with 20% household bleach and water. Always rinse thoroughly to ensure there is no soap or bleach residue in the fabric.

For poufs, the care instructions for the covers are located on the inside of the opening in the cover. For tough stains that cannot be washed out with soapy water, use a solution with 20% household bleach and water. Always rinse thoroughly to ensure there is no soap or bleach residue on the fabric.
