

polywood

MAINTENANCE AND CARE

POLYWOOD™ material is made of HDPE plastic resin that has been purified and UV protected. It is generally cared for and cleaned with soap and warm water. For certain stains and additional cleaning power, a 1/3 bleach and 2/3 water solution can be used on the product without affecting the color. Also, a popular method of cleaning is a high pressure power wash. (Not to exceed 1,500 psi, which is the equivalent of a car wash.) The surface characteristics of the product may require the use of a soft bristle brush to get into the creases.

How to clean POLYWOOD

The only maintenance necessary for your furniture is periodic cleaning. First, hose down the furniture with fresh water. Avoid spraying the teak with a high pressure hose, as high pressure can erode the surface of the timber. Next, scrub the wet furniture using a soft bristle brush and a solution of 2/3 cup laundry detergent and 1/4 cup bleach in 1 gallon of warm water. When finished, rinse the entire piece with more fresh water to remove any remaining cleaning solution. This procedure is sufficient for general cleaning. For more difficult stains we recommend using Kingsley-Bate Teak Cleaner. This will remove the silver-gray patina and restore the furniture to a golden brown color.
